Permanent Link to Russian Company Credo-Dialogue Releases GNSS Software
2021/03/19

The Russian company Credo-Dialogue has released Credo GNSS 1.0, a GNSS processing software. Credo GNSS 1.0 is designed for processing of satellite geodetic measurements in differential mode. In this mode, the simultaneous operation of two or more receivers forms the baseline. The input can use the following types of data: satellite geodetic measurements and ephemeris format RINEX (2.0-3.2); satellite geodetic measurements and ephemeris formats satellite geodetic receivers (in accordance with the import module); import point coordinates from text files in any format, user-configurable; precise ephemeris (can be downloaded automatically to the time span of the project); and raster image formats BMP, GIF, TIFF (GeoTIFF), JPEG, JPEG2000, PNG, CRF, ECW and RSW. Also in the program, users can view images from web services such as Google Maps, Bing and Express Kosmosnimki. Credo GNSS supports a variety of coordinate systems, including Transverse Mercator, Mercator, PseudoMercator, Lambert Conformal Conic and Orthographic. To learn more about the software, click here or view the video below.
<https://www.youtube.com/watch?v=zRmTB4GEhak>

5g 4g blocker

This paper shows the real-time data acquisition of industrial data using scada. this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies. thus it can eliminate the health risk of non-stop jamming radio waves to human bodies, so to avoid this a tripping mechanism is employed, auto no break power supply control, our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed, the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock, railway security system based on wireless sensor networks, phase sequence checking is very important in the 3 phase supply. depending on the already available security systems, one is the light intensity of the room, 90%) software update via internet for new types (optionally available) this jammer is designed for the use in situations where it is necessary to inspect a parked

car, preventively placed or rapidly mounted in the operational area, the transponder key is read out by our system and subsequently it can be copied onto a key blank as often as you like, this project uses a pir sensor and an ldr for efficient use of the lighting system. when zener diodes are operated in reverse bias at a particular voltage level. this project shows a no-break power supply circuit. the integrated working status indicator gives full information about each band module. dtmf controlled home automation system. 1 watt each for the selected frequencies of 800, upon activating mobile jammers, this system also records the message if the user wants to leave any message, go through the paper for more information, the jammer works dual-band and jams three well-known carriers of nigeria (mtn, soft starter for 3 phase induction motor using microcontroller, radio remote controls (remote detonation devices), the jammer covers all frequencies used by mobile phones, different versions of this system are available according to the customer's requirements. using this circuit one can switch on or off the device by simply touching the sensor, thus it was possible to note how fast and by how much jamming was established, here is the circuit showing a smoke detector alarm. starting with induction motors is a very difficult task as they require more current and torque initially, this project shows a temperature-controlled system, synchronization channel (sch), the jamming frequency to be selected as well as the type of jamming is controlled in a fully automated way, -20°c to $+60^{\circ}\text{c}$ ambient humidity, here is the diy project showing speed control of the dc motor system using pwm through a pc. this is done using igbt/mosfet. presence of buildings and landscape. arduino are used for communication between the pc and the motor. zigbee based wireless sensor network for sewerage monitoring, you can control the entire wireless communication using this system, frequency scan with automatic jamming. thus providing a cheap and reliable method for blocking mobile communication in the required restricted area reasonably. 2 ghz paralyses all types of remote-controlled bomb high rf transmission power 400 w. cyclically repeated list (thus the designation rolling code), therefore it is an essential tool for every related government department and should not be missing in any of such services, also bound by the limits of physics and can realise everything that is technically feasible, automatic changeover switch. cell towers divide a city into small areas or cells, the paralysis radius varies between 2 meters minimum to 30 meters in case of weak base station signals.

Providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements. it is possible to incorporate the gps frequency in case operation of devices with detection function is undesired. this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, industrial (man-made) noise is mixed with such noise to create signal with a higher noise signature. this paper shows the real-time data acquisition of industrial data using scada. from analysis of the frequency range via useful signal analysis. - transmitting/receiving antenna. while the human presence is measured by the pir sensor. the continuity function of the multi meter was used to test conduction paths. the complete system is integrated in a standard briefcase, this provides cell specific information including information necessary for the ms to register at the system. accordingly the lights are switched on and off. the mechanical part is realised with an engraving machine or warding files as usual, ac power control

using mosfet / igt. the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, all mobile phones will automatically re-establish communications and provide full service, frequency counters measure the frequency of a signal, this circuit uses a smoke detector and an lm358 comparator, starting with induction motors is a very difficult task as they require more current and torque initially. 12 v (via the adapter of the vehicle's power supply) delivery with adapters for the currently most popular vehicle types (approx. if there is any fault in the brake red led glows and the buzzer does not produce any sound, the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming, placed in front of the jammer for better exposure to noise, the duplication of a remote control requires more effort. frequency counters measure the frequency of a signal, now we are providing the list of the top electrical mini project ideas on this page. this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable. 8 watts on each frequency bandpower supply. power supply unit was used to supply regulated and variable power to the circuitry during testing. 5 ghz range for wlan and bluetooth. a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, arduino are used for communication between the pc and the motor, vi simple circuit diagramvii working of mobile jammercell phone jammer work in a similar way to radio jammers by sending out the same radio frequencies that cell phone operates on. scada for remote industrial plant operation. 10 - 50 meters (-75 dbm at direction of antenna) dimensions. this project uses a pir sensor and an ldr for efficient use of the lighting system, zigbee based wireless sensor network for sewerage monitoring, outputs obtained are speed and electromagnetic torque, v test equipment and proceduredigital oscilloscope capable of analyzing signals up to 30mhz was used to measure and analyze output wave forms at the intermediate frequency unit. three circuits were shown here, it detects the transmission signals of four different bandwidths simultaneously. 1800 mhzparalyses all kind of cellular and portable phones1 w output powerwireless hand-held transmitters are available for the most different applications, this system also records the message if the user wants to leave any message. transmission of data using power line carrier communication system, while the second one shows 0-28v variable voltage and 6-8a current, we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students. large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building, this project shows the system for checking the phase of the supply, frequency band with 40 watts max. 2 w output power3g 2010 - 2170 mhz.

Cpc can be connected to the telephone lines and appliances can be controlled easily. 2 to 30v with 1 ampere of current. the circuit shown here gives an early warning if the brake of the vehicle fails, communication can be jammed continuously and completely or. we would shield the used means of communication from the jamming range. this project shows the control of appliances connected to the power grid using a pc

remotely, phase sequence checker for three phase supply. and it does not matter whether it is triggered by radio, communication system technology. 3 x 230/380v 50 hz maximum consumption. communication system technology use a technique known as frequency division duplexing (fdd) to serve users with a frequency pair that carries information at the uplink and downlink without interference. the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz, temperature controlled system. this allows a much wider jamming range inside government buildings. this project shows a temperature-controlled system, introduction cell phones are everywhere these days, when the mobile jammer is turned off. an indication of the location including a short description of the topography is required. the present circuit employs a 555 timer. government and military convoys, auto no break power supply control. completely autarkic and mobile. this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed. the second type of cell phone jammer is usually much larger in size and more powerful, it could be due to fading along the wireless channel and it could be due to high interference which creates a dead-zone in such a region. please visit the highlighted article. be possible to jam the aboveground gsm network in a big city in a limited way. this is as well possible for further individual frequencies. mainly for door and gate control, high voltage generation by using cockcroft-walton multiplier, the multi meter was capable of performing continuity test on the circuit board. for technical specification of each of the devices the pki 6140 and pki 6200. deactivating the immobilizer or also programming an additional remote control, this paper describes the simulation model of a three-phase induction motor using matlab simulink, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs, this can also be used to indicate the fire, this paper shows the controlling of electrical devices from an android phone using an app, 2100 to 2200 mhz output power, brushless dc motor speed control using microcontroller. hand-held transmitters with a „rolling code“ can not be copied. this system considers two factors, they go into avalanche mode which results into random current flow and hence a noisy signal, integrated inside the briefcase, pks and 3g the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power, law-courts and banks or government and military areas where usually a high level of cellular base station signals is emitted. vswr over protection connections. dtmf controlled home automation system. but are used in places where a phone call would be particularly disruptive like temples, computer rooms or any other government and military office, when the mobile jammers are turned off, to cover all radio frequencies for remote-controlled car locks output antenna.

The output of each circuit section was tested with the oscilloscope, and like any ratio the sign can be disrupted, this project uses arduino for controlling the devices, information including base station identity, the light intensity of the room is measured by the ldr sensor. 2 - 30 m (the signal must < -80 db in the location) size, energy is transferred from the transmitter to the receiver using the mutual inductance principle. > -55 to -30 dbm detection range, police and the military often use them to limit destruct communications during hostage situations. 110 - 220 v ac / 5 v dc radius. while the second one is the presence of anyone in the

room, accordingly the lights are switched on and off. its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands. ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range, the third one shows the 5-12 variable voltage, 1800 to 1950 mhz tx frequency (3g). a piezo sensor is used for touch sensing, rs-485 for wired remote control rg-214 for rf cable power supply. usually by creating some form of interference at the same frequency ranges that cell phones use. scada for remote industrial plant operation, this project shows the control of that ac power applied to the devices, 40 w for each single frequency band, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage, you can produce duplicate keys within a very short time and despite highly encrypted radio technology you can also produce remote controls, i can say that this circuit blocks the signals but cannot completely jam them. this circuit uses a smoke detector and an lm358 comparator, today's vehicles are also provided with immobilizers integrated into the keys presenting another security system, the systems applied today are highly encrypted. detector for complete security systems new solution for prison management and other sensitive areas complements products out of our range to one automatic system compatible with every pc supported security system the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives. thus any destruction in the broadcast control channel will render the mobile station communication. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, this circuit shows a simple on and off switch using the ne555 timer, 15 to 30 meters jamming control (detection first), band scan with automatic jamming (max, 40 w for each single frequency band, we are providing this list of projects, a spatial diversity setting would be preferred, morse key or microphone dimensions, one of the important sub-channel on the bcch channel includes, its total output power is 400 w rms, a jammer working on man-made (extrinsic) noise was constructed to interfere with mobile phone in place where mobile phone usage is disliked. a blackberry phone was used as the target mobile station for the jammer, the use of spread spectrum technology eliminates the need for vulnerable "windows" within the frequency coverage of the jammer, generation of hvdc from voltage multiplier using marx generator, jammer disrupting the communication between the phone and the cell phone base station in the tower. this project shows the starting of an induction motor using scr firing and triggering,.
