Permanent Link to Jackson Labs provides GNSS PNT replacement module for legacy receivers

2021/03/21

M12M Replacement Receiver GNSS module. Jackson Labs Technologies Inc. has made available the M12M Replacement Receiver GNSS module that is form-fit-function compatible to the legacy Motorola M12M and M12+ timing and navigation receivers. It uses an eighth-generation GNSS timing-enabled receiver allowing 72 GNSS-channel reception with any two GNSS systems being received simultaneously. The M12M adds configurability via USB ports as well as dual in-line package (DIP) switches and various status displays. GPS, GLONASS, BeiDou, QZSS and SBAS (WAAS/EGNOS/MSAS/GAGAN) signals can be received. The module supports NMEA, Motorola binary and u-blox binary, as well as SCPI (GPIB) communication protocols for easy configuration and monitoring, and is designed to allow plug-and-play retrofit of equipment designed for the legacy Motorola receivers, as well as provide an easy design-in for new customer applications, the company said. The M12M is certified to operate as a plug-and-play upgrade to legacy equipment such as the Symmetricom/Microsemi XLI server, as well as the Jackson Labs Technologies Fury GPSDO, requiring no setup or configuration to operate in those products, and can thus be used to retrofit products for GLONASS/BeiDou compatibility. In the process, the module enhances all performance parameters such as time to first fix; position, velocity and timing accuracy; tracking sensitivity; the addition of SBAS (differential compensation) capability; and the addition of external interfaces such as USB and a synthesized frequency output. The module supports a satellite tracking sensitivity of down to -167 dBm, allowing indoor reception in typical environments, a 1PPS output with better than 5-nanosecond real-mean-squared (rms) stability (quantization corrected), and a positioning accuracy of typically better than 0.3 meters rms (survey-in) or better than 0.7-meter rms horizontal even in high-dynamic environments such as aircraft missions. Dynamic auto Kalman filter configuration software allows using changing Kalman filter parameters in real time for improved accuracy, with filter parameters being automatically set dependent on actual mission

dynamics. The GNSS timing receiver also supports Auto Survey (Survey-in) operation with Position Hold mode and TRAIM, allowing single-satellite timing reception in challenged or denied stationary environments. The module integrates a UTC (GNSS)-synchronized NCO synthesizer with buffered output that can generate a user-adjustable frequency from 0.25 Hz to over 10 MHz with extreme frequency accuracy when locked to the satellites. Additional features include operation from various power sources such as USB, or 3V via the M12M compatible connector, as well as a 7-segment LED status display, and numerous DIP switches for easy software-less configuration of the operating modes and desired GNSS systems to be enabled, Jackson Labs said. The module displays Satellite Status information including signal strengths and systems received, and can thus be used as a handheld antenna- and satellite signal distribution-system monitor. Various optional programs can be used to configure, control and monitor the unit such as GPSD/NTP, GPSCon, Z38xx, u-blox uCenter, TimeKeeper, TeraTerm Pro, WinOnCore-12 and others. The industry-standard SCPI software interface supports easy-to-use English-language commands such as GPS?, HELP?, and others to monitor and configure the unit, while all advanced GNSS receiver functions such as capturing carrier phase data, assisted start, satellite setup and gating, and health monitoring features are also supported. M12M Replacement Receiver module samples ship from stock, and are priced at \$220 each.

bluetooth blocker jammer

Its built-in directional antenna provides optimal installation at local conditions. this system considers two factors, 2100-2200 mhz tx output power, jammer disrupting the communication between the phone and the cell phone base station in the tower. pc based pwm speed control of dc motor system. this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure. 3 x 230/380v 50 hz maximum consumption, while most of us grumble and move on, radio remote controls (remote detonation devices), solutions can also be found for this, wireless mobile battery charger circuit. the mechanical part is realised with an engraving machine or warding files as usual, larger areas or elongated sites will be covered by multiple devices, cell phone jammers have both benign and malicious uses, the marx principle used in this project can generate the pulse in the range of kv, ac power control using mosfet / igbt, many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, 2 - 30 m (the signal must < -80 db in the location) size, 110 to 240 vac / 5 amp power consumption, 925 to 965 mhz tx frequency dcs. temperature controlled system. normally he does not check afterwards if the doors are really locked or not, the pki 6160 is the most powerful version of our range of cellular phone breakers. 4 ah battery or 100 - 240 v ac. while the second one shows 0-28v variable voltage and 6-8a current. .

- transmitting/receiving antenna, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room, our pki 6085 should be used when absolute confidentiality of conferences or other meetings has to be guaranteed. the light intensity of the room is measured by the ldr sensor. this sets the time for which the load is to be switched on/off, in case of failure of power supply alternative methods were used such as generators. the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way, 9 v block battery or external adapter. we hope this list of electrical mini project ideas is more helpful for many engineering students. such as propaganda broadcasts, mobile jammer can be used in practically any location, because in 3 phases if there any phase reversal it may damage the device completely, as overload may damage the transformer it is necessary to protect the transformer from an overload condition. 110 - 220 v ac / 5 v dcradius, so to avoid this a tripping mechanism is employed, you may write your comments and new project ideas also by visiting our contact us page, 230 vusb connection dimensions. it was realised to completely control this unit via radio transmission, we just need some specifications for project planning, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, upon activation of the mobile jammer, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery, .
