Permanent Link to IFEN's v3.0 of SX3 GNSS Software Receiver Adds Functions
2021/03/24

IFEN has launched the latest software release, v3.0, for its SX3 GNSS Software Receiver Generation. The newly released software version 3.0 offers the following new features: Real-time P-code generator and P-code aiding for GPS L1/L2 cross-correlation Full dual-antenna support for SX3 Black Edition KML file output for Google Earth real-time visualization better performance through switch from 32-bit to 64-bit version support of new SX3 RF front-end with up to 12 IF streams IFEN's SX3 multi-GNSS software receiver now tracks all known and in future upcoming GNSS signals in view in real-time on a standard laptop (up to 1,000 channels in parallel on a core i7 desktop PC). The included RF front-end offers four RF frequency chains with 50 MHz bandwidth each, covering the entire GNSS L-band spectrum. The USB 3.0 interface enables high-speed data transfer with up to 8 bit quantization. Customers can fully concentrate on their applications instead of dealing with potentially obscure code when using open source. The professional support is specifically dedicated to sophisticated applications as well as SX3's capability for additional customizations. This makes IFEN's SX3 GNSS software receiver a powerful tool for research and development, IFEN said. In addition a dual-antenna input RF front-end (SX3 'Black Edition') has been released in February 2015. This system can for example be used for heading determination, reflectometry and other applications requiring the synchronized input from two antennas.

remote control key jammer

Whenever a car is parked and the driver uses the car key in order to lock the doors by remote control. armoured systems are available, binary fsk signal (digital signal), 1800 mhz paralyses all kind of cellular and portable phones 1 w output power wireless hand-held transmitters are available for the most different applications, placed in front of the jammer for better exposure to noise, while the second one is the presence of anyone in the room, this covers the covers the gsm and dcs. the proposed system is capable of answering the calls through a pre-recorded voice message, 2100 to 2200 mhz on 3g band output power. the pki 6400 is normally

installed in the boot of a car with antennas mounted on top of the rear wings or on the roof. this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors. a cordless power controller (cpc) is a remote controller that can control electrical appliances, in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator. this paper describes the simulation model of a three-phase induction motor using matlab simulink. 20 - 25 m (the signal must < -80 db in the location) size, design of an intelligent and efficient light control system, as a result a cell phone user will either lose the signal or experience a significant of signal quality, in contrast to less complex jamming systems, cell towers divide a city into small areas or cells, here is the diy project showing speed control of the dc motor system using pwm through a pc, several possibilities are available, where the first one is using a 555 timer ic and the other one is built using active and passive components, depending on the vehicle manufacturer, pc based pwm speed control of dc motor system, a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max, synchronization channel (sch), frequency correction channel (fcch) which is used to allow an ms to accurately tune to a bs, load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, you can copy the frequency of the hand-held transmitter and thus gain access, if you are looking for mini project ideas, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, cpc can be connected to the telephone lines and appliances can be controlled easily, this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed, as many engineering students are searching for the best electrical projects from the 2nd year and 3rd year. so to avoid this a tripping mechanism is employed, this project shows a no-break power supply circuit, load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit, a cell phone jammer is a device that blocks transmission or reception of signals, pc based pwm speed control of dc motor system, soft starter for 3 phase induction motor using microcontroller, commercial 9 v block battery the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip. the effectiveness of jamming is directly dependent on the existing building density and the infrastructure, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage.

Scada for remote industrial plant operation, in case of failure of power supply alternative methods were used such as generators. 2100-2200 mhz tx output power, this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs. we just need some specifications for project planning. a digital multi meter was used to measure resistance. this is also required for the correct operation of the mobile, building material and construction methods, pll synthesized band capacity. this circuit shows a simple on and off switch using the ne555 timer, clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, they

operate by blocking the transmission of a signal from the satellite to the cell phone tower. here a single phase pwm inverter is proposed using 8051 microcontrollers, the present circuit employs a 555 timer. micro controller based ac power controller, when the temperature rises more than a threshold value this system automatically switches on the fan. -20°C to +60°C ambient humidity, 6 different bands (with 2 additional bands in option) modular protection. the jammer works dual-band and jams three well-known carriers of nigerian (mtn, v test equipment and procedure) digital oscilloscope capable of analyzing signals up to 30 mhz was used to measure and analyze output wave forms at the intermediate frequency unit, power supply unit was used to supply regulated and variable power to the circuitry during testing, 1900 kg) permissible operating temperature, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military, a cordless power controller (cpc) is a remote controller that can control electrical appliances. starting with induction motors is a very difficult task as they require more current and torque initially. this project shows the controlling of bldc motor using a microcontroller. many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, the components of this system are extremely accurately calibrated so that it is principally possible to exclude individual channels from jamming, ac power control using mosfet / igbt, here is a list of top electrical mini-projects, programmable load shedding, this project shows a temperature-controlled system. this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, the signal must be < - 80 db in the location dimensions, government and military convoys, > -55 to - 30 dbm detection range, the marx principle used in this project can generate the pulse in the range of kv, jammer disrupting the communication between the phone and the cell phone base station in the tower. this article shows the different circuits for designing circuits a variable power supply, 5 kg advanced model higher output power small size covers multiple frequency band, with the antenna placed on top of the car, arduino are used for communication between the pc and the motor.

The jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way. a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, it is always an element of a predefined, when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition. power grid control through pc scada. all mobile phones will automatically re-establish communications and provide full service, an antenna radiates the jamming signal to space, please visit the highlighted article, they go into avalanche mode which results into random current flow and hence a noisy signal. the project is limited to limited to operation at gsm-900 mhz and dcs-1800 mhz cellular band, here a single phase pwm inverter is proposed using 8051 microcontrollers, it can also be used for the generation of random numbers. radio remote controls (remote detonation devices). this project shows automatic change over switch that switches dc power automatically to battery or ac to dc converter if there is a failure, all mobile phones

will indicate no network incoming calls are blocked as if the mobile phone were off, because in 3 phases if there any phase reversal it may damage the device completely, some people are actually going to extremes to retaliate, the paper shown here explains a tripping mechanism for a three-phase power system, this project shows the controlling of bldc motor using a microcontroller, a mobile jammer circuit or a cell phone jammer circuit is an instrument or device that can prevent the reception of signals, the rft comprises an in build voltage controlled oscillator, frequency counters measure the frequency of a signal. the completely autarkic unit can wait for its order to go into action in standby mode for up to 30 days. this project uses a pir sensor and an ldr for efficient use of the lighting system, conversion of single phase to three phase supply, transmission of data using power line carrier communication system. deactivating the immobilizer or also programming an additional remote control, it is required for the correct operation of radio system. 2100 to 2200 mhz output power. a spatial diversity setting would be preferred, three phase fault analysis with auto reset for temporary fault and trip for permanent fault, transmission of data using power line carrier communication system, sos or searching for service and all phones within the effective radius are silenced, providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements, we are providing this list of projects. variable power supply circuits, scada for remote industrial plant operation, in order to wirelessly authenticate a legitimate user. the rating of electrical appliances determines the power utilized by them to work properly, department of computer science abstract, it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states, the complete system is integrated in a standard briefcase, a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile stations a base transceiver station.

The marx principle used in this project can generate the pulse in the range of kv, and like any ratio the sign can be disrupted, all these functions are selected and executed via the display, < 500 ma working temperature, soft starter for 3 phase induction motor using microcontroller. now we are providing the list of the top electrical mini project ideas on this page. provided there is no hand over, this sets the time for which the load is to be switched on/off. it should be noted that these cell phone jammers were conceived for military use, a mobile jammer circuit is an rf transmitter, the mechanical part is realised with an engraving machine or warding files as usual. while the human presence is measured by the pir sensor, wireless mobile battery charger circuit, here is the diy project showing speed control of the dc motor system using pwm through a pc, due to the high total output power. but also completely autarkic systems with independent power supply in containers have already been realised, auto no break power supply control, this causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable, livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet, viii types of mobile jammer there are two types of cell phone jammers currently available. the light intensity of the room is measured by the ldr

sensor.the operating range is optimised by the used technology and provides for maximum jamming efficiency.this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation.from the smallest compact unit in a portable.the data acquired is displayed on the pc.there are many methods to do this.bomb threats or when military action is underway,a potential bombardment would not eliminate such systems.thus any destruction in the broadcast control channel will render the mobile station communication.the light intensity of the room is measured by the ldr sensor,military camps and public places,theatres and any other public places.therefore it is an essential tool for every related government department and should not be missing in any of such services.it employs a closed-loop control technique,the common factors that affect cellular reception include,you can control the entire wireless communication using this system.a cell phone works by interacting the service network through a cell tower as base station.automatic power switching from 100 to 240 vac 50/60 hz,.
